## **DETAILED ACTION**

### ***Reasons for Allowance***

1. The following is an examiner's statement of reasons for allowance:

The subject matter of the independent claim could either not be found or was not suggested in the prior art of record. The subject matter not found was a tamper-evident closure for a syringe with a Luer connection and a separate one piece element having a cap, a frangible web and a fixation end, wherein the fixation end is welded to the syringe and in combination with the other elements or steps of the claim.

The prior art USPN 5,624,402 – Imbert teaches a similar element but not in the proper arrangement since the frangible web is 86, which is not formed as a one piece element and alternatively 86 is used as the fixation component that becomes “welded” to the syringe.

The examiner gives the term “weld/welded” structural weight and not a product by process limitation due to the specific process that must occur in order for the two elements to be welded together. In this claim the term “welded” and “weld connection” is given specific structure and patentable weight thus making the combination of Imbert with other references in the prior art not obvious.

The independent claims also include other patentable subject matter in combination with the other elements or steps of the claim not mention in the above paragraph.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
